

A SOUND EFFECT
ON PEOPLE

ECOPHON COMPANY PROFILE

We are

Ecophon

IN EVERYDAY LIFE

Saint-Gobain Ecophon contributes to good indoor environments for working, healing and learning. We do this by developing, manufacturing and delivering acoustic products and systems designed around the natural evolution of human hearing – replicating the outdoor sound experience indoors, because that’s just better for people.

Having a sound effect on people, in every way we can, is what we do proudly. That promise makes every one of us a passionate advocate for the importance of room acoustics to people’s wellbeing – whatever the space, activity or need.

Ecophon has business units in 20 countries, delegations in another 30 countries worldwide, and approximately 800 employees. The head office is located in Hyllinge, just outside Helsingborg, Sweden. Ecophon is part of the global Saint-Gobain Group.

MORE THAN A PRODUCT

You may think you’ve come to a company that manufactures and sells acoustic ceilings and wall panels. And you are not wrong but that is not the only answer you would get if you ask anyone that works here or knows us.

You see, every single person at Ecophon shares a passion and conviction that room acoustics are an integral component of any great work environment that benefits people and the environment. The collective knowledge we share in this area is far greater than “just” the product (albeit a top-quality, innovative product).

A Sound effect on people

OUR BRAND PROMISE

A sound effect on people - This is the core essence, position, and value of Ecophon, that summarize the overall benefits of our services and products.

ECOPHON MISSION

To contribute to a good working environment for the eye the ear and the mind.

ECOPHON VISION

To earn global leadership in room acoustic comfort through sound absorbing systems, enhancing end user performance and wellbeing.

Acoustics

SOUND IS AN IMPORTANT PART OF THE WORKING ENVIRONMENT

Sound affects us in many ways. A good sound environment is proven to lead to an increase in creativity, concentration and productivity within the workplace as well as an improvement in mental health. Disturbing noise causes fatigue, stress and communication problems. This impairs both productivity and safety, which in turn reduces profitability and can violate work environment regulations. Sick leave and high staff turnover also impact negatively on staff welfare and profitability. There is much to be gained from achieving an optimal acoustic environment.

ACTIVITY BASED ACOUSTIC DESIGN

One of the first things you need to consider when designing is that people will most likely perform a variety of activities, at any given time, these activities may require their own acoustic solution. We call this Activity Based Acoustic Design. Ecophon's solutions support the activity taking place, and as a result, enhance people's job satisfaction, job performance and overall wellbeing. For example, when designing an office, acoustic consideration should be given to both tasks requiring high levels of concentration and to group working and how these functions can co-exist; whilst on a factory floor sound reduction and hearing safety will probably be of utmost importance.

HOW CAN THE ACOUSTIC ENVIRONMENT BE IMPROVED

Noise policy - Define a noise policy to raise awareness about the acoustic environment

Equipment - Make demands on suppliers of machinery and other equipment including PPE

Treating the room - Measure sound levels at various points within the space, especially close to the areas where people are working

- Consider the possibility of acoustic zoning
- If possible, gather together noise sources and create quiet areas in the room
- Install sound absorbers in ceilings, on walls or as suspended baffles

Sustainability

COMMITMENT - TRANSPARENCY - CIRCULARITY - INNOVATION

Sustainability is more than a word – it’s a collective movement to protect people and the planet that requires honest commitment and genuine care. That’s why Ecophon is building on better materials, transparency, and principles, to name just a few.

We actively support an industry-wide drive to standardized, easy-access Environmental Product Declarations for individual products, rather than product families. Their inclusion of full lifecycle data, from raw material sourcing to end of life, rather than only the favorable stages. A move away from self-declared labels, or non-independently verified sustainability claims. And for any promises of net zero carbon emission targets to be validated by the Science-Based Targets initiative.

If we’re going to build a sustainable future, it has to start with an honest approach, high ambition and the best of intentions – to build on better together.

COMMITMENT

True sustainability has nothing to hide.

This graphic features a person climbing a rock formation, a circular inset of hands shaking, and a circular inset of a globe.

TRANSPARENCY

Bringing our integrity to sustainability.

This graphic features a woman's face, a circular inset of a globe, and a circular inset of hands holding a globe.

CIRCULARITY

Use less. Do more. That's the way to sustainability we can all believe in.

This graphic features a person's silhouette, a circular inset of an ear, and a circular inset of a small plant growing in soil.

INNOVATION

The world won't become carbon neutral just by planting trees.

This graphic features a person standing in a futuristic setting, a circular inset of a globe, and a circular inset of a human eye.

Ecophon is the leading supplier of indoor acoustic solutions that improve working performance and quality of life. We believe in the difference sound can make to our everyday lives, and are passionate advocates for the importance of room acoustics to people's wellbeing – whatever the space, activity or need.

Having a sound effect on people is the principle that guides all we do. We're proud of the Swedish heritage and human approach that promise is founded on. Our uncompromising commitment to transparent sustainable practice. And, as members of the Saint-Gobain Group, to be doing our part in making the world a better home
